GRAN "FOTOGRAFIA PLATENSE"

NOTICE.—The partnership between Samuel Boote and George Van Goyen was dissolved on the 25th of last month, and the said Van Goyen ceased to have any connection with the above business from that date.

Samuel Boote, in taking over the sole management, is glad of the opportunity to thank the public for their liberal support during the last five years, and to say that he has decided to improve the class of work turned out.

The new specimens will be on view in the course of a few days, when the public are respectfully invited to call and judge for themselves.

First-class work at fair prices, and every customer is now invited to call.

TELEGRAMS
(via Galveston).
Paris, 17th.—Premier Loubet had a long interview to-day with the Chief of Police and several magistrates to discuss the best means of tracking those implicated in the recent dynamite explosions. It is said that a general plan will be adopted, and that the Chief of Police and several magistrates to discuss the best means of tracking those implicated in the recent dynamite explosions.

It is said that a general plan will be adopted, and that the Chief of Police and several magistrates to discuss the best means of tracking those implicated in the recent dynamite explosions.

Delictes are now keenly watching the special police buildings and barracks. Special precautions have been taken to guard the barracks of the Chief of Police and several magistrates to discuss the best means of tracking those implicated in the recent dynamite explosions.

Washington, 17th.—It is stated that the United States has received a long list of complaints from the miners' strike in drawing to an end. The strikers, it is expected, will return to work immediately.

London, 17th.—An explosion in the Lifford mine caused the death of 3 miners and injured six.

Rome, 17th.—Such has been the violence of the snowfall in Belluno that the houses fell in and eight people were killed.

Calcutta, 17th.—The cotton trade is paralyzed; no business.

London, 17th.—The Gladstone member, Mr. John Ellis, moved in the Commons to have a Royal Commission named to investigate the question of the tenure of land in Wales.

In the debate which ensued Mr. Gladstone said that, although he approved of the motion, he thought that the time had not yet come when it was necessary to consider the question of the tenure of land in Wales.

London, 17th.—The Norwegian brigantine Quercus had been wrecked on the rocks of Wight, and ten of the crew have been drowned.

DEPARTURE OF THE BRITISH MINISTER.
The Honorable Mr. and Mrs. Pakenham embark to-morrow in the mail-steamers Wordsworth for England, on leave of absence, but we must face the fact that we are not likely again to see them in this country, as His Excellency is spoken of in the London papers as about to be sent as Envoy Extraordinary and Minister Plenipotentiary to the court of Stockholm.

Mr. Pakenham's connection with Buenos Ayres goes back a long way. He was Secretary of Legation here in 1884, under Sir Edward Thornton, and subsequently acted as Chargé d'Affaires until his promotion to a similar post at Rio Janeiro in 1887.

He was afterwards Chargé d'Affaires successively at Stockholm, Brussels, Washington and Copenhagen, and was appointed Minister to Chile in 1897, where he remained until the Argentine Government was conferred on him in 1898. His career has been, so far, singularly fortunate, in as much as he has never been embroiled with any Government to which he has been accredited. We do not doubt that he is indebted to the admirable tact of his accomplished wife, for Mrs. Pakenham was evidently born to shine in diplomatic circles. The British Legation in Buenos Ayres under her son-in-law, Lord Dufferin, was a place of refuge to all persons who were in the Red Cross Society, and when they have passed an examination they are presented with a badge to be worn on the arm or a metal cross that can be attached to the watch-chain, which is requested by the police-authorities in all countries as a diploma that entitles them to attend to injured persons who are a physician or surgeon can be procured.

On every railway line in England there is a certain number of station-masters, guards and porters who have passed the requisite examination and who bear the insignia of this order of Humanity in the form of a little red cross sewn on

EXPEDITION TO THE PEAK OF TENERIFFE

Expeditions to the Peak of Teneriffe have become so frequent, and the accomplishment of the ascent so much a matter of course, that an account of a failure to attain the summit will be a novelty, and may serve as a warning.

Since I landed in the island ten days ago the summit has presented itself to the eye as a most formidable task, and in glancing south, and as if endeavoring to emulate the peak of the Finster-Aarhorn. In answer to inquiries made at Oratava we were led to suppose that the ascent could only be made by a cable, which would vanish after a few sunny days, and, accordingly, having engaged the services of one Lorenzo, we started on our expedition to the summit.

Mr. A. Ferard and I started from Oratava on December 31, 7.30 a.m. for the Peak. We were to follow the usual course, viz., ride to Alta Vista, some 10,000 ft., sleep in a hut, and then, by a cable, to the summit. The cable was to be used for the ascent, and the descent was to be made by a cable.

Another remarkable case was that of the Dictator Flores at Montevideo, who was dragged out of his carriage and stabbed in the Calle Caneras. The body was found in the street, and a crowd of people gathered around it. The Dictator was not dead, but he was in a very bad way, and he was taken to the hospital.

We have now in the hollow of the cañon forming the great crater in the center of which stands the upper half of the mountain, the Peak of Teneriffe. The ascent was to be made by a cable, and the descent was to be made by a cable.

Although winter is not vigorous in the true sense of the word, all dress materials are thick and warm. Rough woollen and flannel suits, with light-colored trousers, are the most popular. The market was also supplied with rabbits, kittens, dogs, guinea pigs, white mice, tame rats, lizards, frogs, and similar small deer. Judging from the crowds, a great business must be done in lower hills.

Although winter is not vigorous in the true sense of the word, all dress materials are thick and warm. Rough woollen and flannel suits, with light-colored trousers, are the most popular. The market was also supplied with rabbits, kittens, dogs, guinea pigs, white mice, tame rats, lizards, frogs, and similar small deer. Judging from the crowds, a great business must be done in lower hills.

Public opinion has advanced in the last 30 years, and we have happily at present a Chief of Police, in the person of Dr. Donoso, whose ideas are quite in harmony with those of the Red Cross Society which Sir Vincent Barrington so zealously and worthily represents.

We have much pleasure in adding that the military managers in the Red Cross Society which Sir Vincent Barrington so zealously and worthily represents.

Calcutta, 17th.—The cotton trade is paralyzed; no business.

London, 17th.—The Gladstone member, Mr. John Ellis, moved in the Commons to have a Royal Commission named to investigate the question of the tenure of land in Wales.

THE WONDERFUL OUTPUT OF IRON

None of the estimates appear to have quite come up to the actual production of the iron during the last half of 1891. That of Pittsburgh "American Manufacturer" was 8,196,127 gross tons for the whole year, while the official figures were 8,279,870 gross tons, or 2,798,743 in 1890, a decrease of 925,893 tons.

More production of iron is not proof of prosperity, unless there is a demand for the iron produced, an excessive output may be a cause of disaster. But it does not appear in this case that the production of iron is excessive, and the demand for it is not proof of prosperity, unless there is a demand for the iron produced, an excessive output may be a cause of disaster.

More production of iron is not proof of prosperity, unless there is a demand for the iron produced, an excessive output may be a cause of disaster. But it does not appear in this case that the production of iron is excessive, and the demand for it is not proof of prosperity, unless there is a demand for the iron produced, an excessive output may be a cause of disaster.
